. POLYGALA floribus imberbibus, pedunculis squar-
 rosis, caule herbaceo ramo erecto.
Habitat in Virginia Kalm. ☉
 Caulis spiribamæus s. pedalis, firmus, angulatus, ramo-
 sus, erectus, ramis caule altioribus. Folia alterna, an-
 gusto-lanceolata. Spicæ serminales, laxæ, sanguineæ, o-
 vatae. decidunt enim flosculi inferiores maturi, dum
 novelli accrescunt unde, Pedunculus lacerus s. Squar-
 rosus.

“He was a man of great piety and respect for the Scriptures. One of his main goals in systematizing the tremendous varieties of living creatures was to attempt to delineate the original Genesis ‘kinds’.”

– Dr. Henry M. Morris

“The flowers’ leaves. . . serve as bridal beds which the Creator has so gloriously arranged, adorned with such noble bed curtains, and perfumed with so many soft scents that the bridegroom with his bride might there celebrate their nuptials with so much the greater solemnity. . . .”

– Carolus Linnaeus
